F.A.M.E User Manual

Financial Accounting under Modern Environment — Windows, Android and web

Nov 2, 2026 · @Rathinagiri

1. About F.A.M.E

F.A.M.E is a double-entry accounting program for a single business: chart of accounts, GST invoices, bill-wise receivables and payables, stock, fixed assets and the standard financial reports. It works fully offline; your books stay on your own device.

The same program comes in three forms. They share one set of screens and one set of rules, so this manual applies to all of them.

Version	Best for	Where your data lives
Windows app	Daily work on a PC	An encrypted database file on the PC
Android app	Entries and reports on a phone or tablet	An encrypted database file in the app's private storage
Web app (browser)	Trying the program without installing	The browser's own storage on that device

Use the Windows or Android app for real books. The web version keeps data in browser storage, which the browser can clear; it is meant for evaluation.

How to read this manual:

- Sections 2 and 3 are one-time setup: install, create your passphrase, enter company details.
- Sections 4 to 9 follow a normal working day: masters, then entries, then reports.
- Sections 10 to 13 cover tags, bulk import, backups and common questions.
- Screenshots use a demo company, Demo Traders (Chennai, GST registered, financial year April–March). Amounts are in rupees with Indian digit grouping (₹1,00,000).

2. Installing and first start

Install the app, then create the passphrase that encrypts your books. Both apps are downloaded from the **Releases** page of the F.A.M.E GitHub repository.

Windows

1. Download `FAME-Windows-Setup-v….exe` from the latest Windows release.

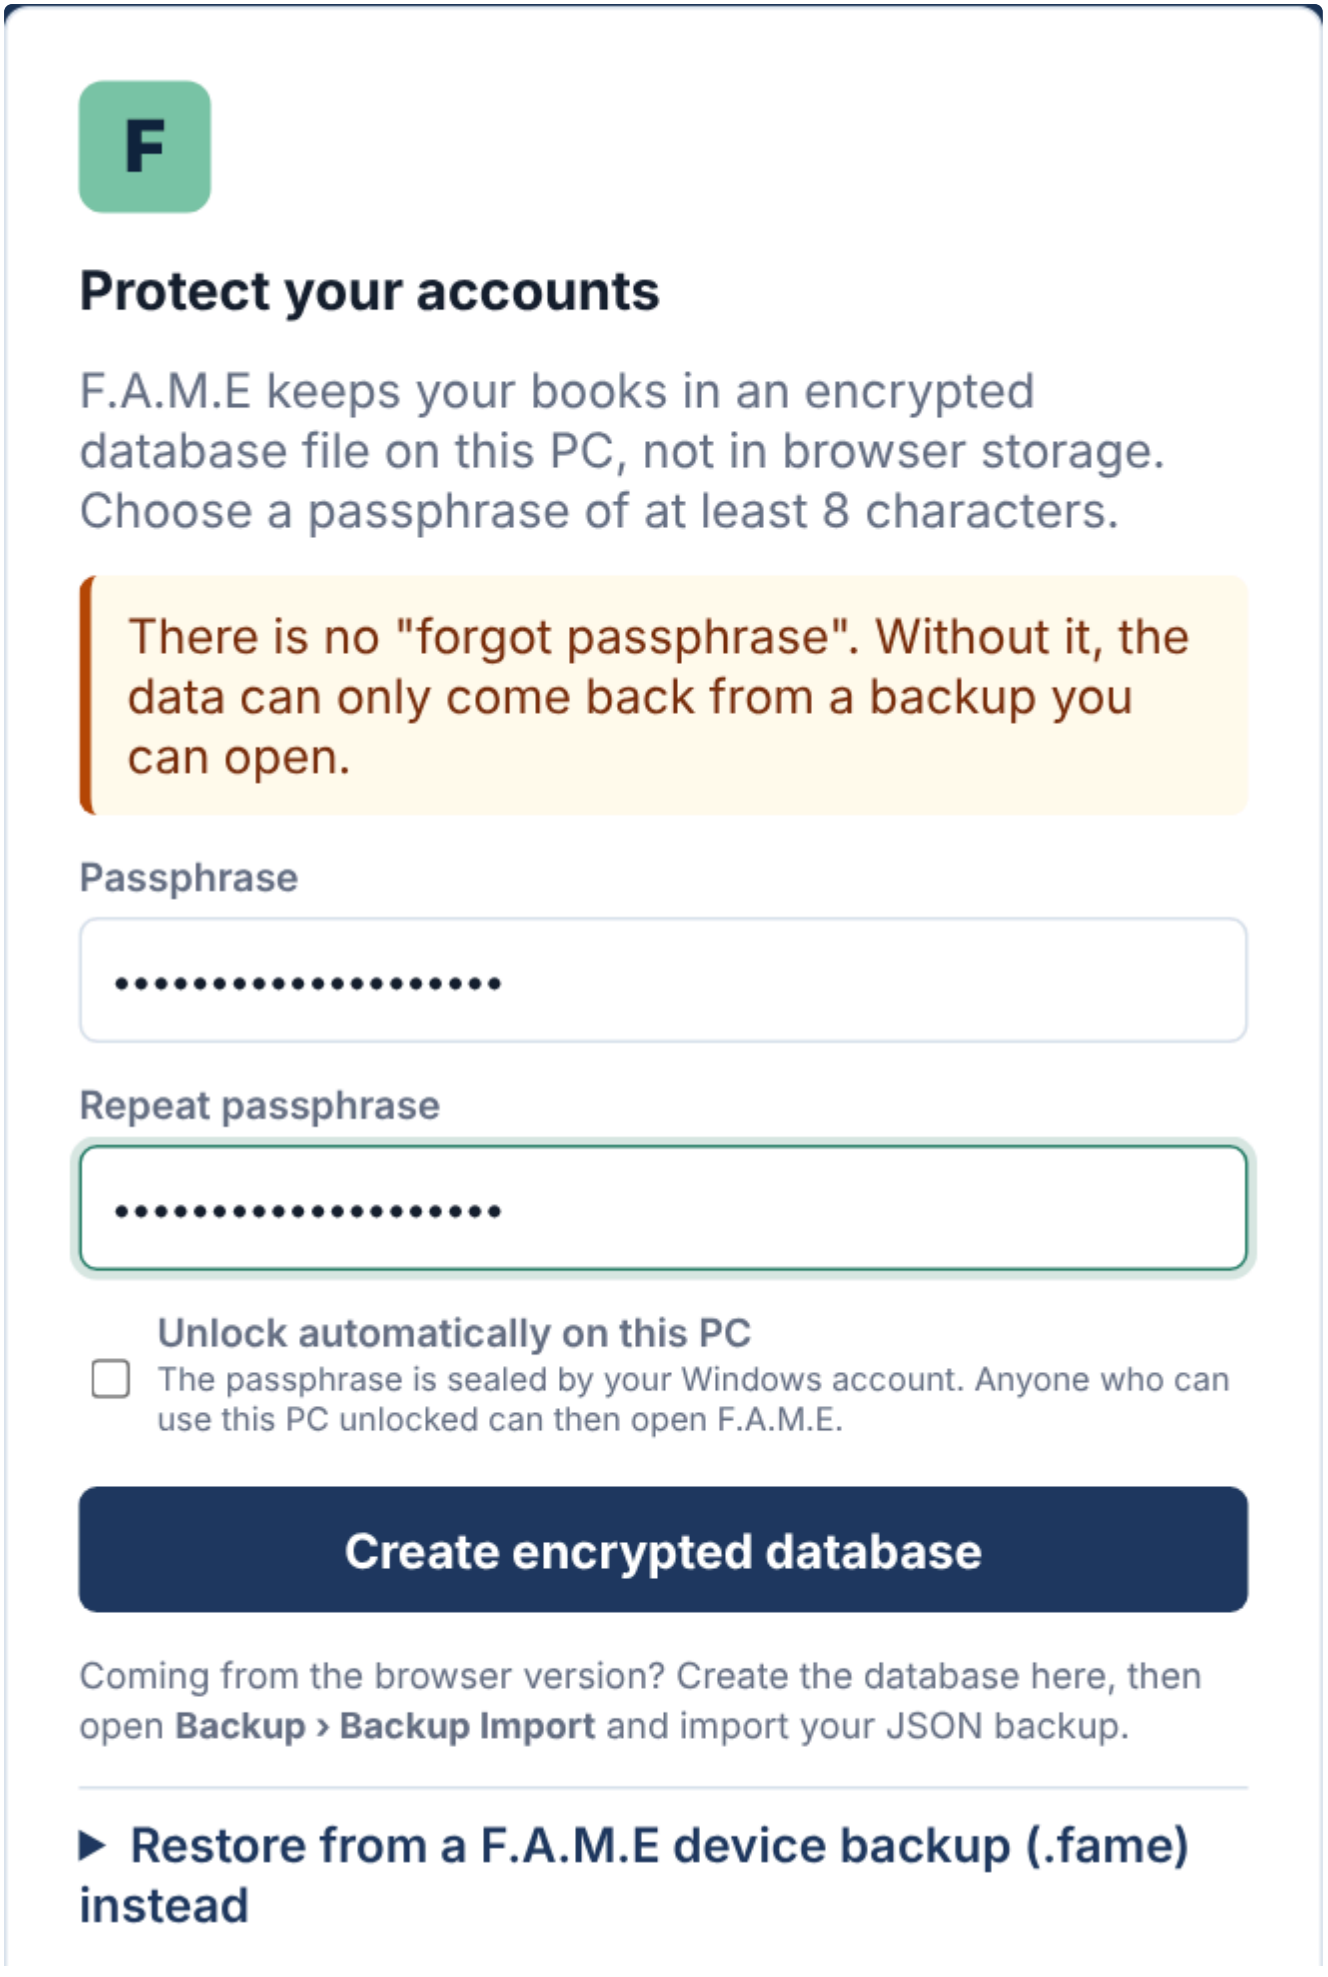

2. Run it. If Windows shows "Windows protected your PC", choose **More info**, then **Run anyway** (the installer is not code-signed yet).
3. Choose the install folder and finish. F.A.M.E appears on the desktop and in the Start menu.
4. To update later, run the newer installer over the old one. Your data is kept.

Android

1. On the phone, open the latest Android release and download `FAME-v….apk`.
2. Open the file. If asked, allow your browser or file manager to install apps.
3. To update later, install the newer .apk over the old one. Your data is kept, as long as both are release builds.

First start: create the encrypted database

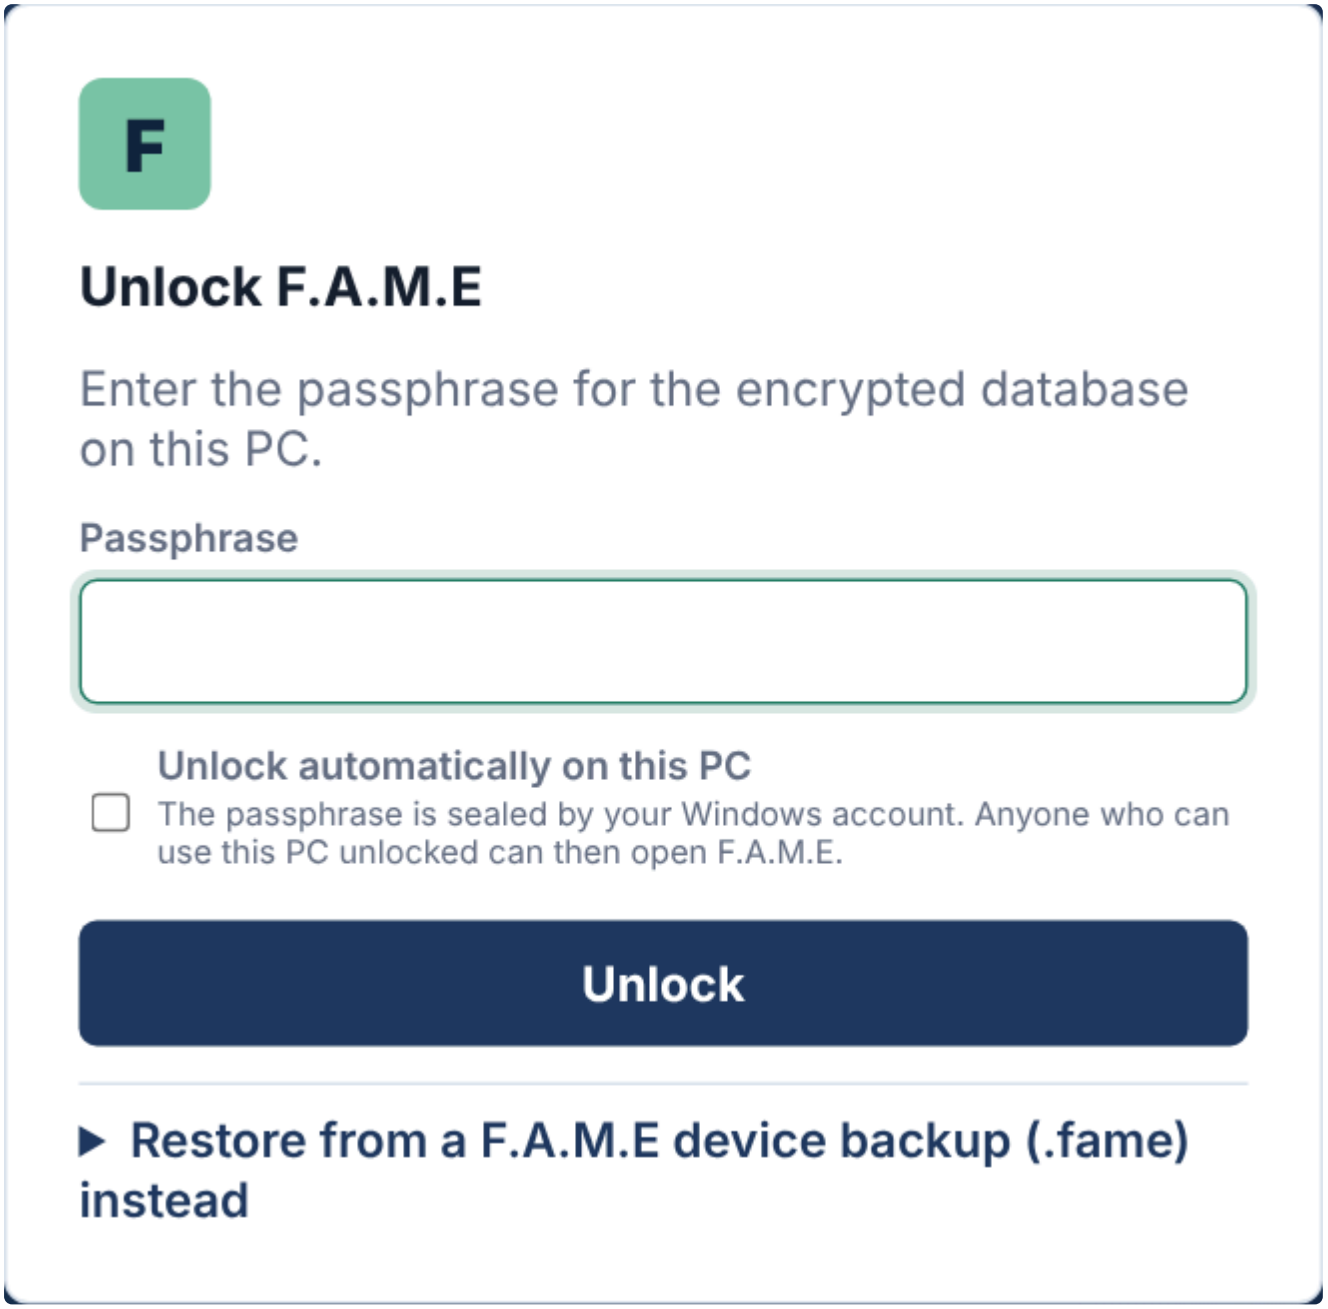

The first time F.A.M.E opens, it asks for a passphrase. This passphrase encrypts the whole database file (SQLCipher 4, AES-256), so the file is unreadable without it.

F
Protect your accounts
F.A.M.E keeps your books in an encrypted database file on this PC, not in browser storage. Choose a passphrase of at least 8 characters.
There is no "forgot passphrase". Without it, the data can only come back from a backup you can open.
Passphrase
Repeat passphrase
Unlock automatically on this PC
The passphrase is sealed by your Windows account. Anyone who can use this PC unlocked can then open F.A.M.E.
Create encrypted database
Coming from the browser version? Create the database here, then open Backup › Backup Import and import your JSON backup.
▶ Restore from a F.A.M.E device backup (.fame) instead

1. Type a passphrase of at least 8 characters, twice. A short sentence is easier to remember and harder to guess than a single word.
2. Optional: tick **Unlock automatically on this PC / phone**. The passphrase is then sealed by your Windows account or the Android Keystore, and F.A.M.E opens without asking. Anyone who can use the device unlocked can then open your books, so leave it off on shared devices.
3. Press **Create encrypted database**.

There is no "forgot passphrase". Write it down and keep it somewhere safe, away from the device.

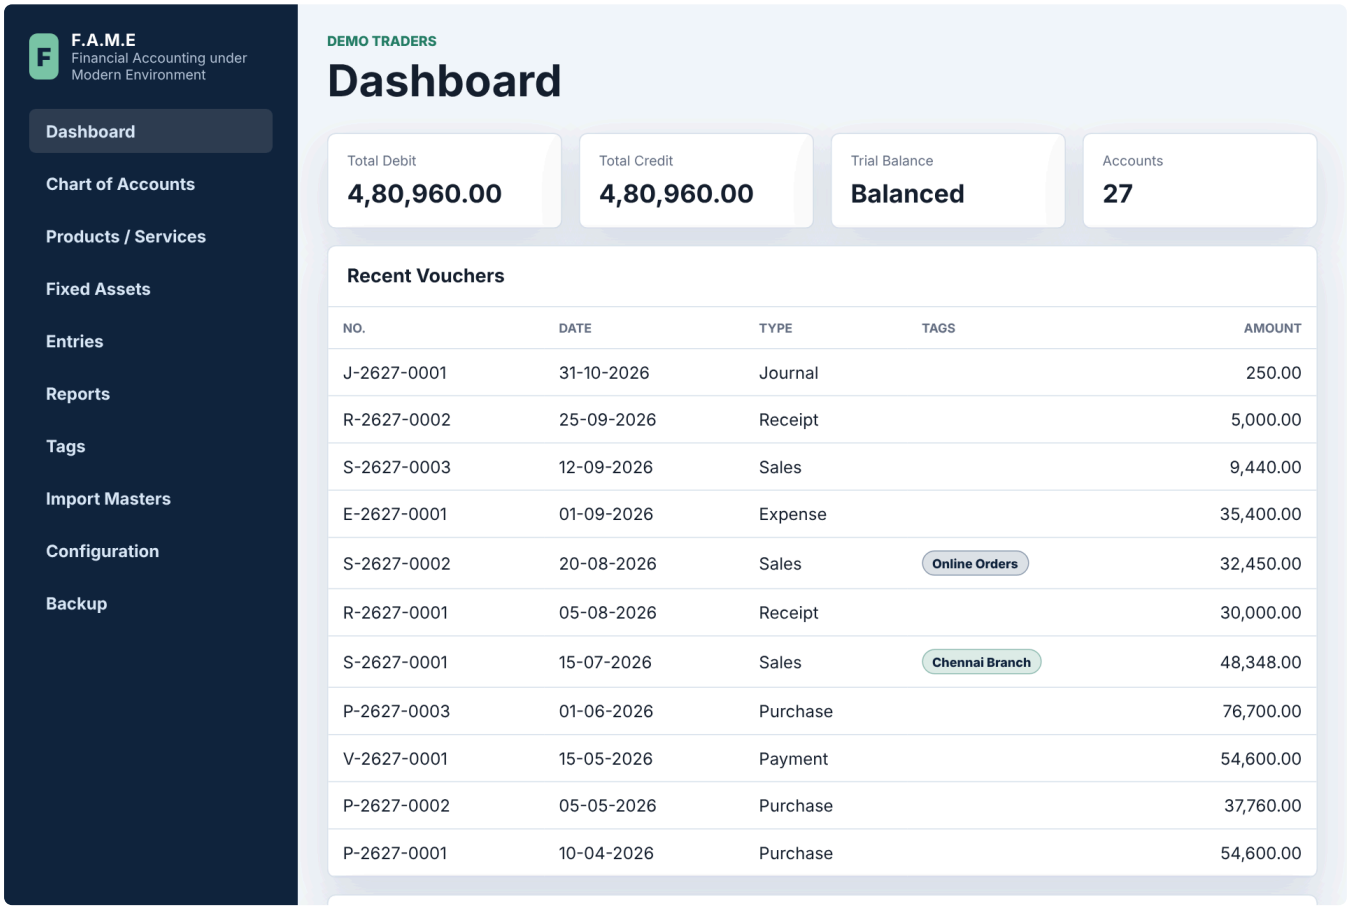

Every later start shows the unlock screen (unless you chose to unlock automatically). A wrong passphrase is refused with a message; nothing is changed.

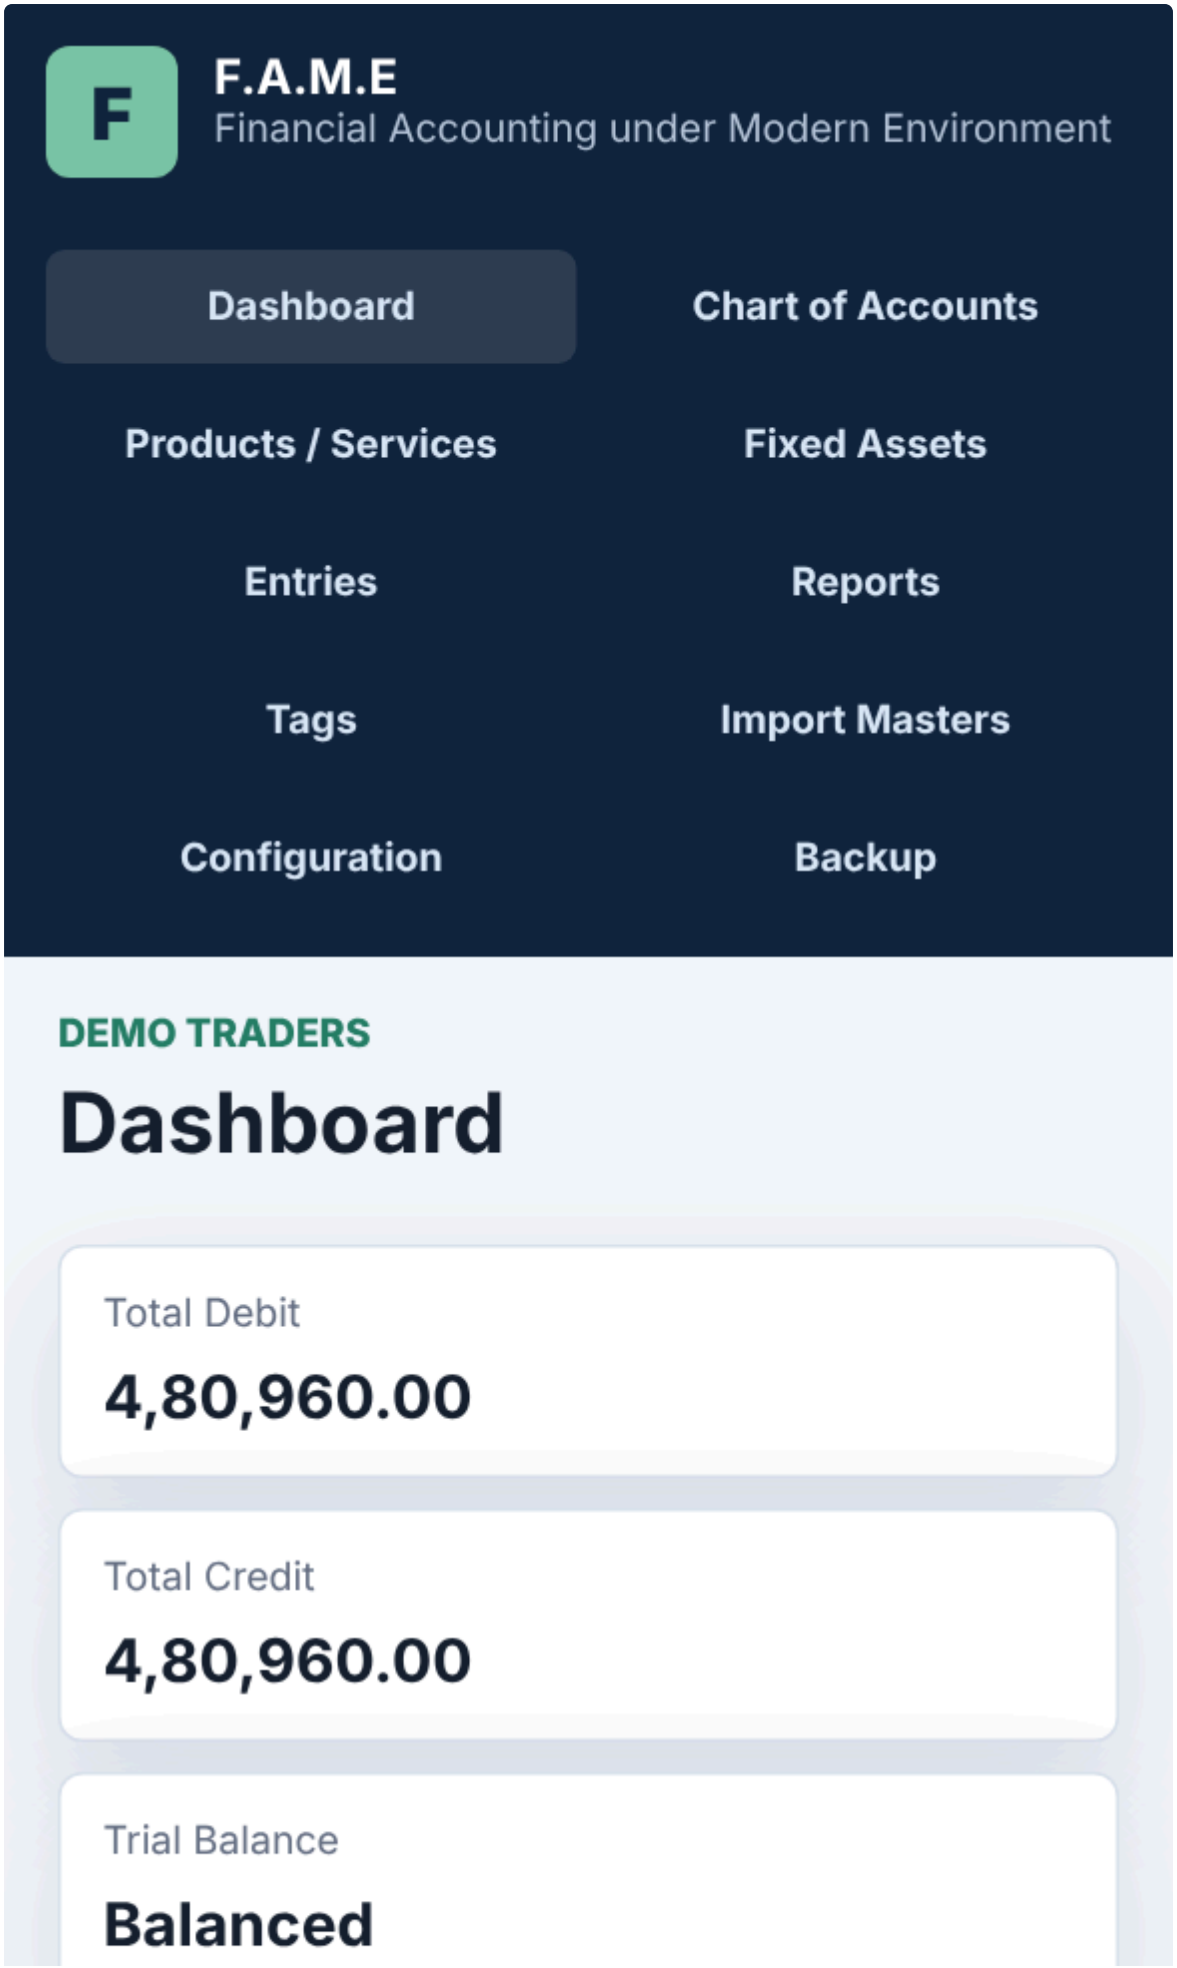

Moving from the web version or another device

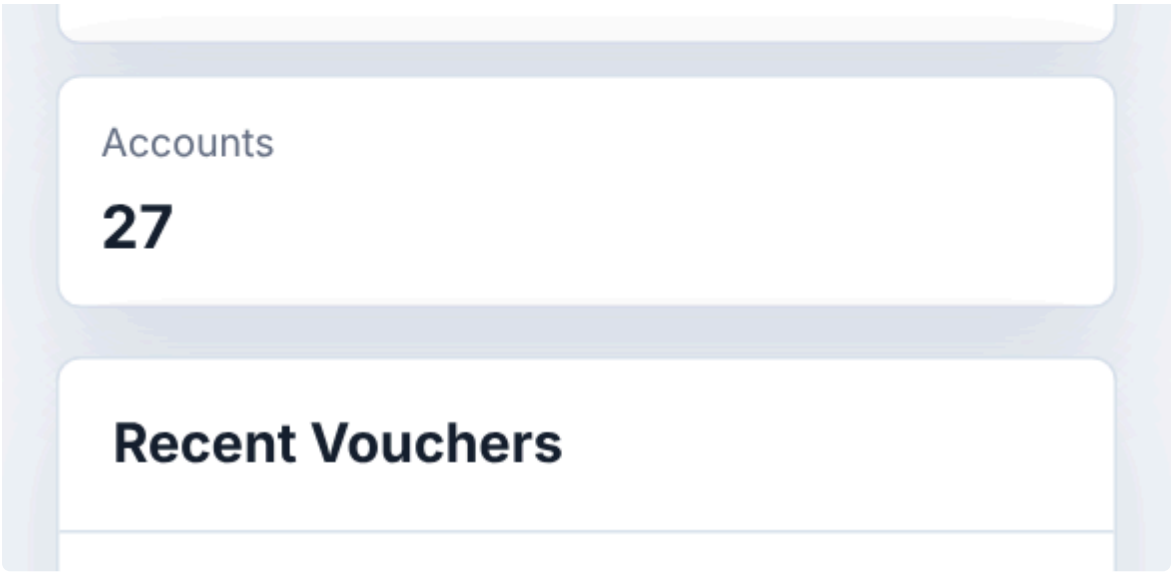

- From the web version: export a JSON backup there (Backup › Backup Export), create the database here, then use Backup › Backup Import.
- From another PC or phone running F.A.M.E: on the first-start screen open **Restore from a F.A.M.E device backup (.fame)**, choose the .fame file and enter the passphrase that file was made with.

The screen layout. The menu on the left (at the top on a phone) opens each part of the program. The line at the bottom of the menu confirms where your data is stored, for example "Encrypted SQLite file (SQLCipher 4) on this PC".

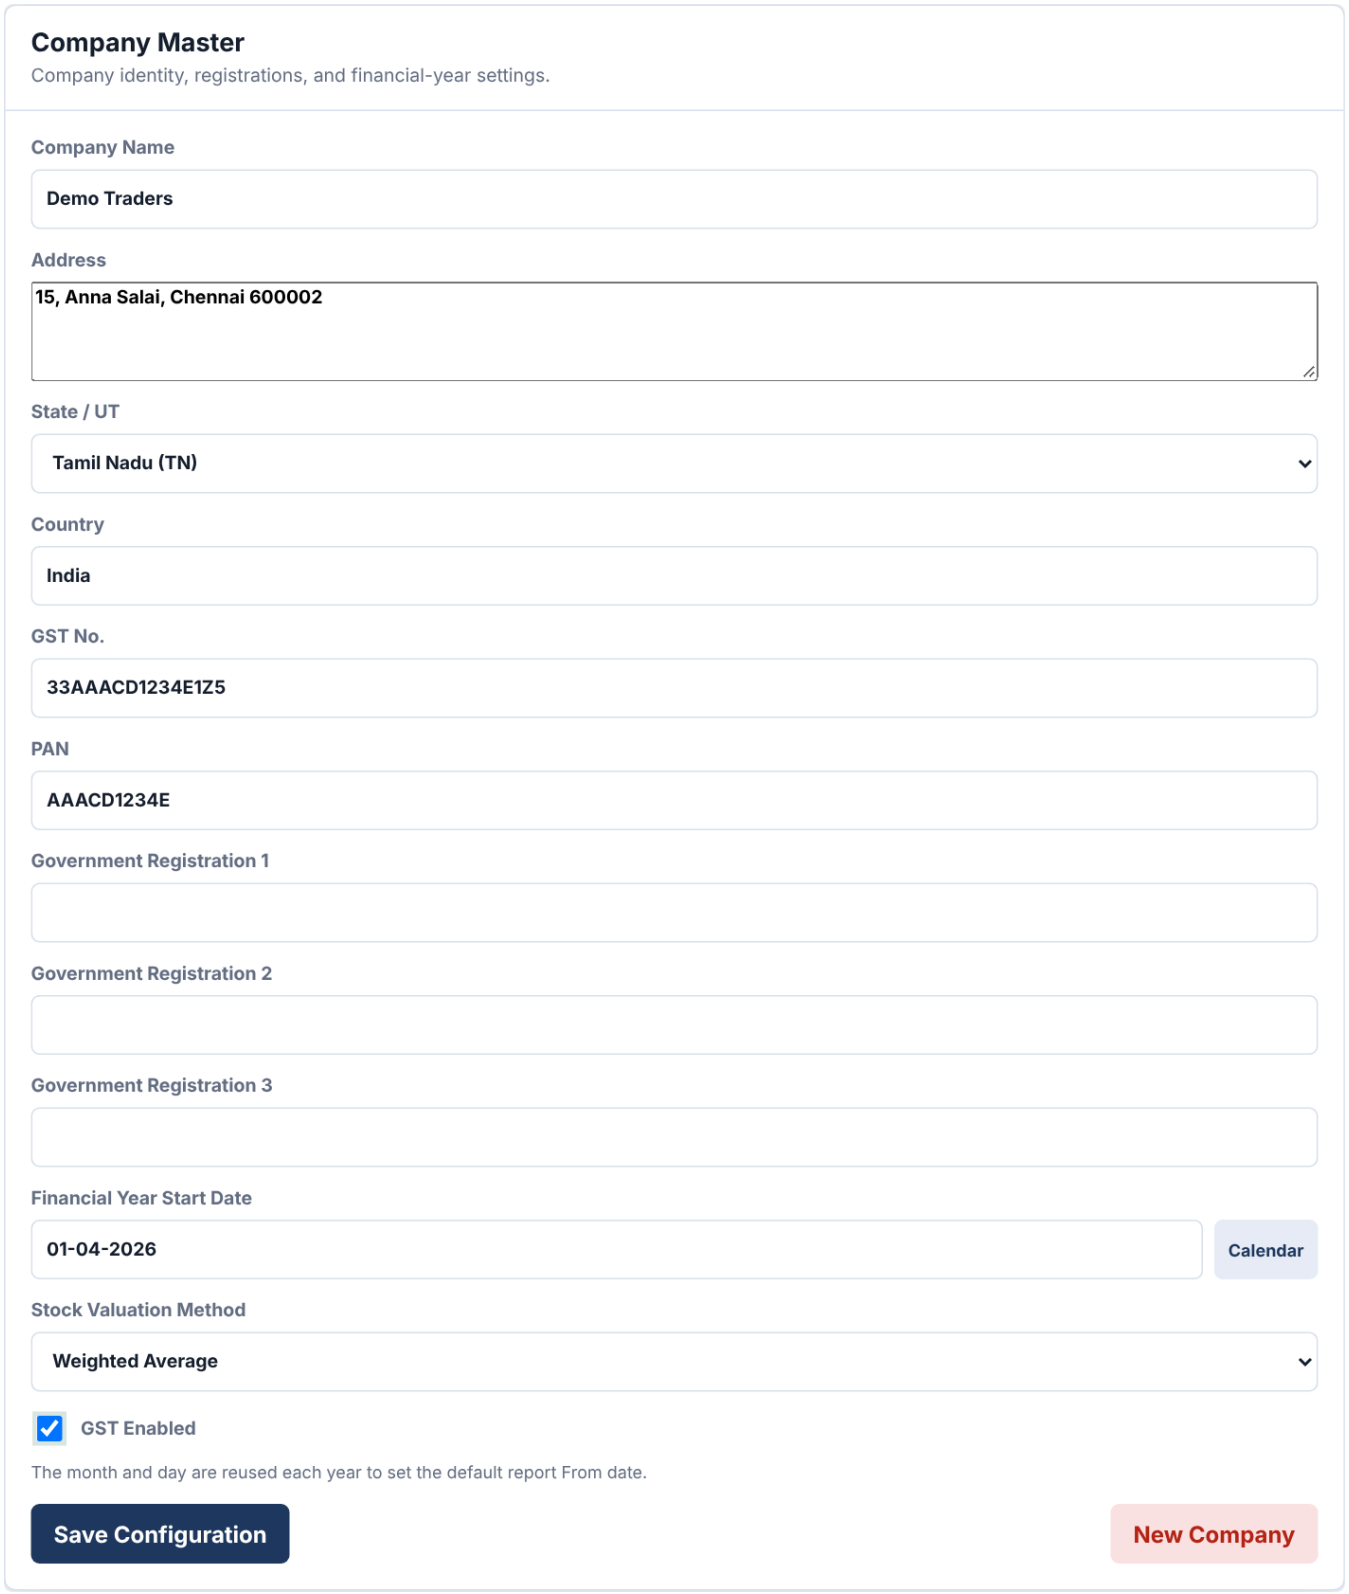

The Dashboard shows total debits and credits, whether the trial balance agrees, the latest vouchers and the trial balance by account. On a phone the menu sits at the top and the screens stack into one column.

3. Company configuration

Enter the company details once, before the first voucher: the GST setting cannot be changed after transactions exist. Open **Configuration** in the left menu, fill the form and press **Save Configuration**.

Field	What to enter	Why it matters
Company Name	Legal or trade name	Printed on invoices and report headers

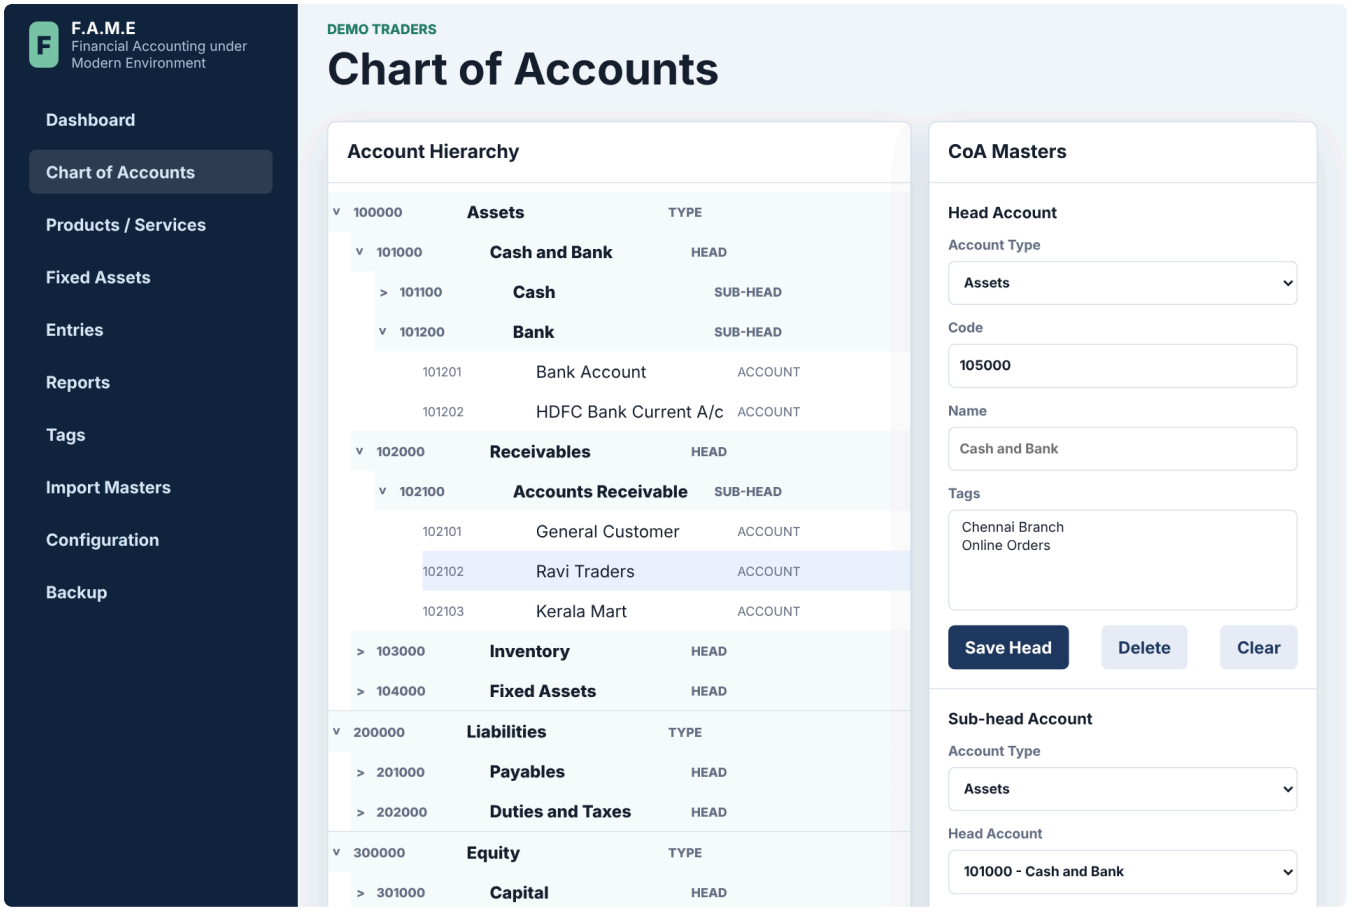

Field	What to enter	Why it matters
Address, State / UT, Country	Registered address	The State decides CGST + SGST (same state) or IGST (other state) on every invoice
GST No., PAN	Your GSTIN and PAN	Printed on sales invoices
Government Registration 1–3	Any other registrations (MSME, IEC, FSSAI…)	Printed where filled
Financial Year Start Date	01-04-2026 for an April–March year	Voucher numbers restart each year (S-2627-0001); reports default to the year's start
Stock Valuation Method	Weighted Average or FIFO	Used to value closing stock in Stock Summary and the Balance Sheet
GST Enabled	Tick if the business is GST registered	Turns on HSN/SAC, GST rates and tax columns; locked once vouchers exist

New Company clears every master, voucher and setting on this device and starts a fresh set of books. Take a backup first (section 12); the app asks you to confirm.

4. Chart of Accounts

Every account sits in a four-level tree with 6-digit codes: **Type › Head › Sub-head › Account**. Only accounts (the last level) take postings; heads and sub-heads group them in reports.

Level	Example code	Example name	Who creates it
Type	100000	Assets	Fixed: Assets, Liabilities, Equity, Income, Expenses
Head	102000	Receivables	Built in, or you
Sub-head	102100	Accounts Receivable	Built in, or you
Account	102102	Ravi Traders	You (some built in)

Adding an account

1. Open **Chart of Accounts**. In the **Account** form choose the Account Type, Head and Sub-head.
2. The Code fills in automatically with the next free number. Change it only if you need a specific code.
3. Type the Name. For a balance-sheet account (assets, liabilities, equity) enter any **Opening Balance** and choose **Debit** or **Credit**.
4. For a customer, supplier, employee or other person you deal with, tick **Personal Account**. Address, GST No., PAN, three registration numbers and State / UT appear; fill what applies. The State decides intra-state or inter-state GST on invoices.
5. Optionally pick Tags (section 10), then **Save Account**.

Heads and sub-heads are added the same way in their own forms above. Click any line in the tree to load it into its form for editing.

Customers and suppliers. A customer is a personal account under head **102000 Receivables**; a supplier is a personal account under **201000 Payables**. Any sub-head under those heads works (for example 102200 Retail Debtors). Only these accounts appear in the Customer / Supplier lists on vouchers. The quickest way to add one is **+ New customer / + New supplier** on the voucher itself (section 6), which fills the head and the Personal tick for you.

Opening balances. Enter each balance-sheet account's balance on the first day you use F.A.M.E. If debits and credits do not agree, the difference is carried automatically in **302102 Opening Balance Adjustment Account**. When all opening balances are in, that account should show zero; if it does not, an opening balance is missing or on the wrong side.

Built-in accounts. F.A.M.E posts some entries to fixed codes, so these are protected: their code, type and parent cannot change and they cannot be deleted. You can rename them.

Code	Name	Used for
101000 / 101101	Cash and Bank / Cash in Hand	Cash and bank lines on receipts and payments
102000 / 201000	Receivables / Payables	Customer and supplier accounts, bill-wise settlement
104000 / 104901	Fixed Assets / Accumulated Depreciation	Fixed asset purchases and depreciation
202101 / 202102 / 202103	CGST / SGST / IGST	GST on every invoice (input and output)
302101 / 302102	Accumulated Profit and Loss / Opening Balance Adjustment	Profit brought forward, opening differences
401101 / 402101 / 501101	Sales / Service Income / Purchases	Default accounts for products and services
502301	Depreciation Expense	Depreciation journals

Editing and deleting. Names can always be changed. Once an account has postings, its code and sub-head are locked. An account can be deleted only if it has no postings; a head or sub-head only if nothing sits under it.

5. Products and services

Every line on an invoice is a product or service from this master, so set them up before raising invoices. Each one carries its GST rate and the accounts it posts to; the invoice then calculates tax and posts entries by itself.

Clear

Field	What to enter
Name	As it should print on invoices. Names must be unique.
Type	**Product** (goods you stock) or **Service** (no stock).
Category, Sub-category	Products only; used to group the Stock Summary. Create them in the two small forms on the left first.
Opening Quantity, Opening Value	Products only: stock on hand on your start date, and its total value.
HSN / SAC Code	Printed on the invoice.
GST Rate %	The rate for this item. CGST + SGST or IGST is worked out from it on each invoice.
ITC available on purchase	Leave ticked when input tax credit can be claimed. Untick for blocked credit: the GST is then added to the cost instead of the CGST/SGST/IGST accounts.
Purchase Account, Sales Account	Where purchases and sales of this item post. Defaults: 501101 Purchases, 401101 Sales (402101 Service Income for services). For expense bills such as rent, set the Purchase Account to that expense (for example 502101 Rent Expense).

Checking GST rates and HSN/SAC codes is your responsibility; F.A.M.E applies whatever rate you enter.

To edit, click the item in the list; to add many at once, use Import Masters (section 11).

6. Entering vouchers

All transactions are entered on one screen, **Entries**: choose the voucher type and the form changes to suit it. Seven types cover everything; each has its own number series per financial year.

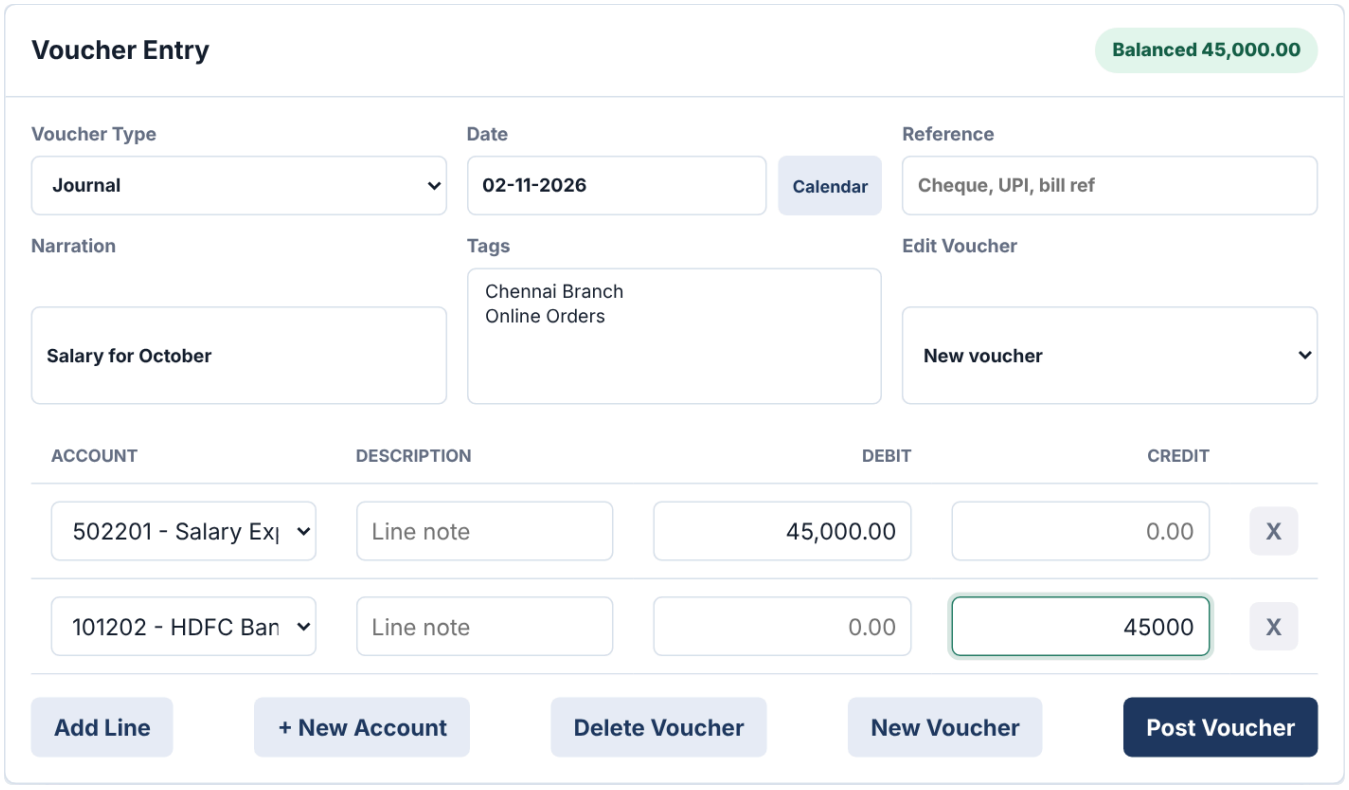

Voucher type	Number	Use it for	You enter
Receipt	R-2627-0001	Money received	Debit and credit lines; optional customer and invoices it settles (section 8)
Payment	V-2627-0001	Money paid	Debit and credit lines; optional supplier and bills it settles (section 8)
Purchase Invoice	P-2627-0001	Goods or services bought on a supplier's invoice	Supplier, supplier invoice no. and date, products with quantity and taxable value
Sales Invoice	S-2627-0001	Goods or services sold	Customer, products with quantity and taxable value; prints a tax invoice
Expense Voucher	E-2627-0001	A bill for an expense, such as rent or professional fees	Party, bill no. and date, service items
Income Voucher	I-2627-0001	A bill you raise for other income, such as commission	Party, service items
Journal	J-2627-0001	Adjustments, provisions, salaries, transfers	Any debit and credit lines

"2627" is the financial year 2026-27. Numbers are given automatically when you post and restart at 0001 each year.

The common fields

- **Date**: type dd-mm-yyyy or use **Calendar**. The date decides the financial year and number.
- **Reference**: cheque number, UPI or NEFT reference, or any note to trace the payment.
- **Narration**: one line describing the entry; it prints on ledgers and invoices.
- **Tags**: optional labels for branches, projects or anything you want to report on separately (section 10).

Line-based vouchers (receipt, payment, journal). Pick an account on each line and enter a debit or a credit. The badge at the top shows **Balanced** when debits equal credits, or the **Difference**; a voucher posts only when balanced. **Add Line** adds a line; **X** removes one. On receipts the first line is the cash or bank account (debit side); on payments it is on the credit side.

+ New Account opens the Chart of Accounts form without losing the voucher you are typing. Save the account and you return to the same voucher with the new account on the line you were in.

Posting, editing and deleting

- **Post Voucher** saves it and clears the form for the next one (a sales invoice stays open so you can print it).
- To change a saved voucher, pick it in **Edit Voucher** (the latest 500 are listed), or click its number in any report. Change it and post again; it keeps its number unless you change its type or move it to another financial year.
- **Delete Voucher** removes the selected voucher. An invoice that has receipts or payments adjusted against it cannot be deleted until those are changed.
- **New Voucher** clears the form without saving.

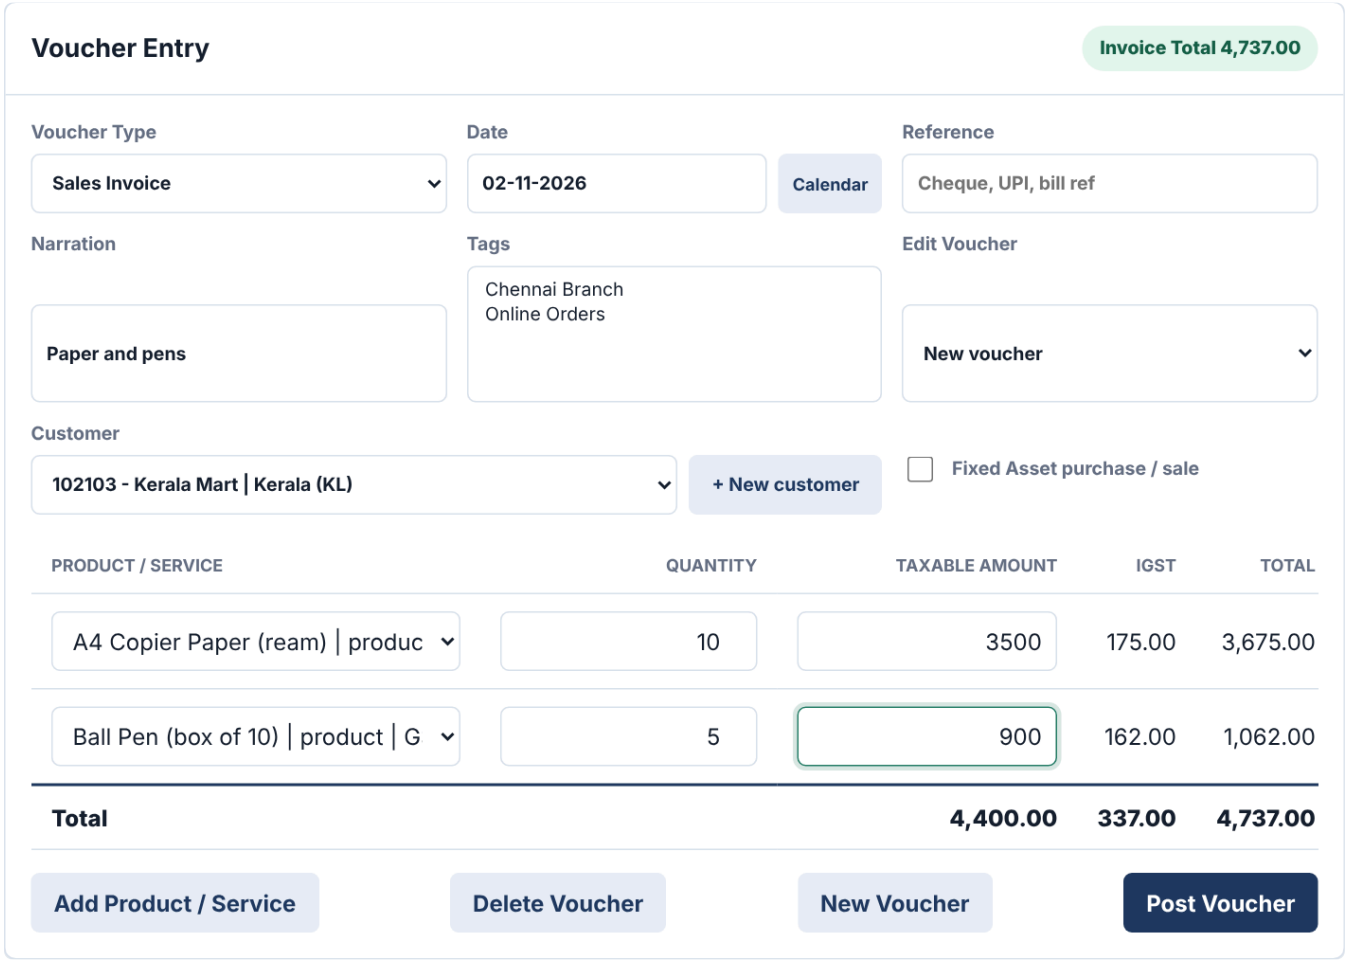

7. Invoices, GST and fixed assets

Purchase invoices, sales invoices, expense vouchers and income vouchers are entered as items, not as debit and credit lines. You pick the party and the products; F.A.M.E calculates GST and makes the accounting entries.

Raising a sales invoice

1. Choose **Sales Invoice**, the date and the **Customer**. The customer's state is shown beside the name.

2. On the first item row pick the product, enter the quantity and the **taxable amount** for that row (the value before GST). **Add Product / Service** adds rows.
3. GST appears per row. If the customer is in your state you see **CGST** and **SGST** (half the rate each); if in another state, **IGST** at the full rate. The badge shows the invoice total.
4. Press **Post Voucher**.

What gets posted (sales): Dr Customer with the invoice total; Cr Sales (or the product's sales account) with the taxable value; Cr 202101 CGST and 202102 SGST, or 202103 IGST, with the tax. For a purchase the sides reverse, and the tax is debited to the same GST accounts as input credit (unless ITC is unticked on the product). A product's quantity moves stock in or out at the same time.

Printing. After posting, a sales invoice stays on screen with **Print Invoice** and **Download Invoice PDF**. The PDF carries your company and GST details, the customer's, HSN/SAC and rate per line, the tax split, the total in words and the narration as notes. Invoices can also be printed later from the **Print** link beside them in the Daybook, Ledger and Sales Journal. On Android the PDF is saved to Documents/FAME/Exports and opens in your PDF viewer for printing or sharing.

Notes

Stationery supply

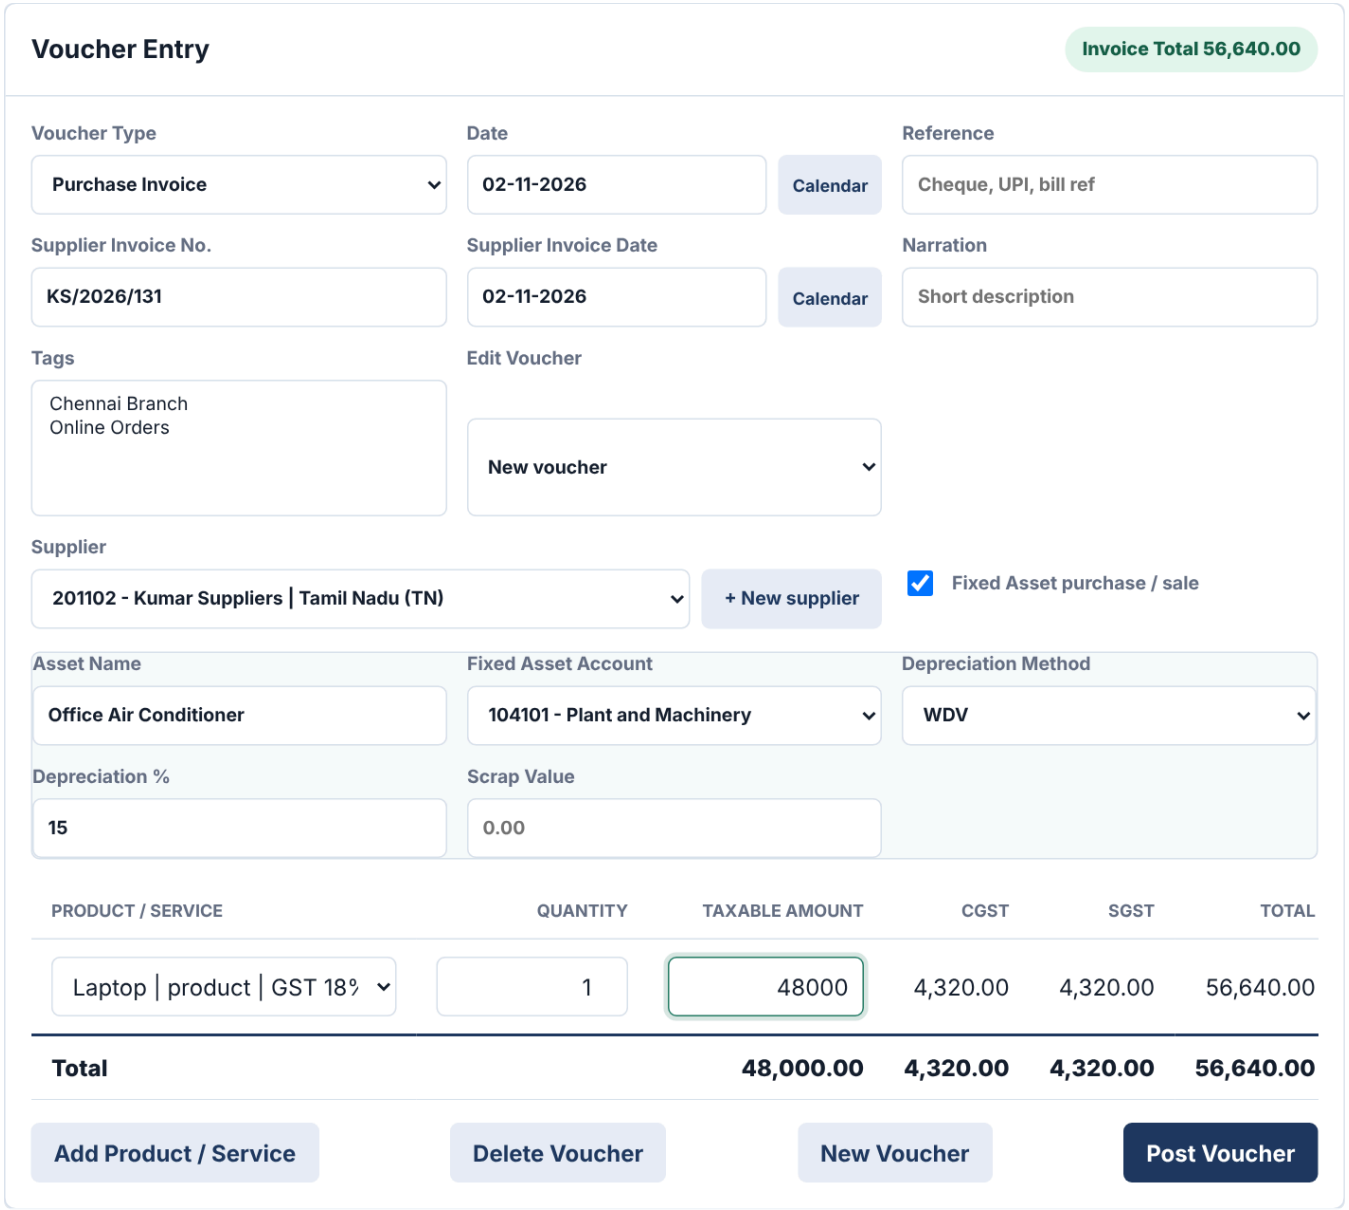

Computer-generated invoice

Purchase invoices add two fields: **Supplier Invoice No.** and **Supplier Invoice Date**, as printed on the supplier's bill. They appear in the Purchase Journal and in bill-wise payments.

Expense and income vouchers work the same way for bills that are not stock: rent, professional fees, repairs, commission. Set up the service with the right expense or income account (section 5).

Buying a fixed asset. On a purchase invoice tick **Fixed Asset purchase / sale**, then enter:

- **Asset Name**, for example Office Air Conditioner.
- **Fixed Asset Account**: an account under head 104000 Fixed Assets. The cost is debited here instead of to Purchases.
- **Depreciation Method**: Straight Line (on cost) or WDV (on written-down value), and **Depreciation %** per year.
- **Scrap Value**: the value it will not be depreciated below.

Selling a fixed asset. On a sales invoice tick the same box and choose **Asset Sold**. F.A.M.E removes the asset's cost and accumulated depreciation and posts the profit to 403101 Profit on Sale of Assets or the loss to 503101 Loss on Sale of Assets. Depreciation up to the sale date that was not yet posted is charged in the same voucher, and the full working (cost, depreciation, book value, profit or loss) is written into its narration.

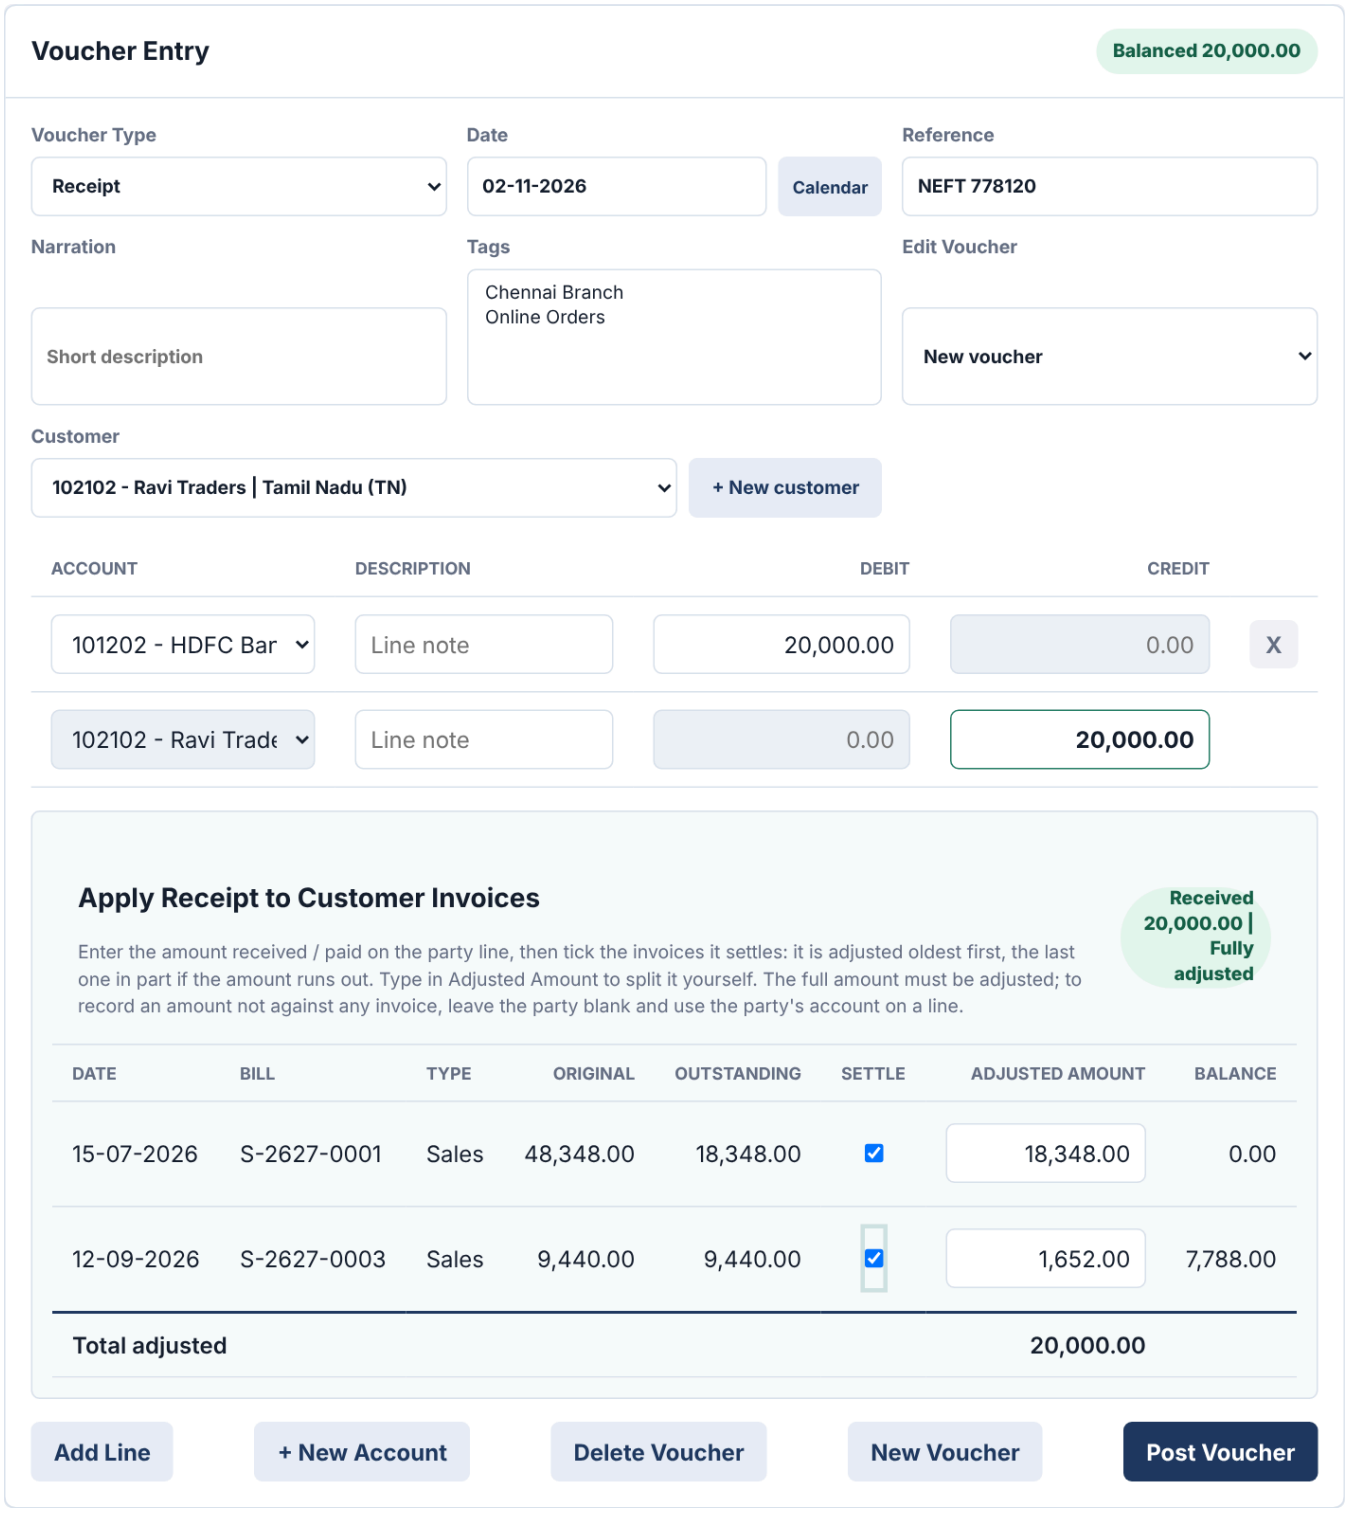

Depreciation is posted from the Depreciation Schedule report (section 9). It is time-proportionate: the year's charge × days used ÷ days in the financial year. This is book depreciation; tax depreciation under the Income-tax law is computed separately. An asset purchase cannot be edited once depreciation has been posted or the asset has been sold.

8. Receipts and payments against bills

A receipt or payment either settles specific invoices (choose the customer or supplier) or is recorded as unadjusted (leave the party blank). The choice decides whether invoices show as paid.

Settling invoices (customer or supplier selected)

1. Choose **Receipt** (or **Payment**), the date and the bank or cash account on the first line.
2. Pick the **Customer** (or **Supplier**). Its line is fixed to that party, and its unpaid invoices appear below, oldest first.
3. Type the amount received on the customer's line, for example 20,000.
4. Tick **Settle** on the invoices it covers. The amount is applied oldest first; when it runs out, the last invoice is settled in part. **Balance** shows what each invoice still owes.
5. To split it differently, type in **Adjusted Amount**. Invoices you did not type in share what is left.
6. When the badge reads **Fully adjusted**, press **Post Voucher**.

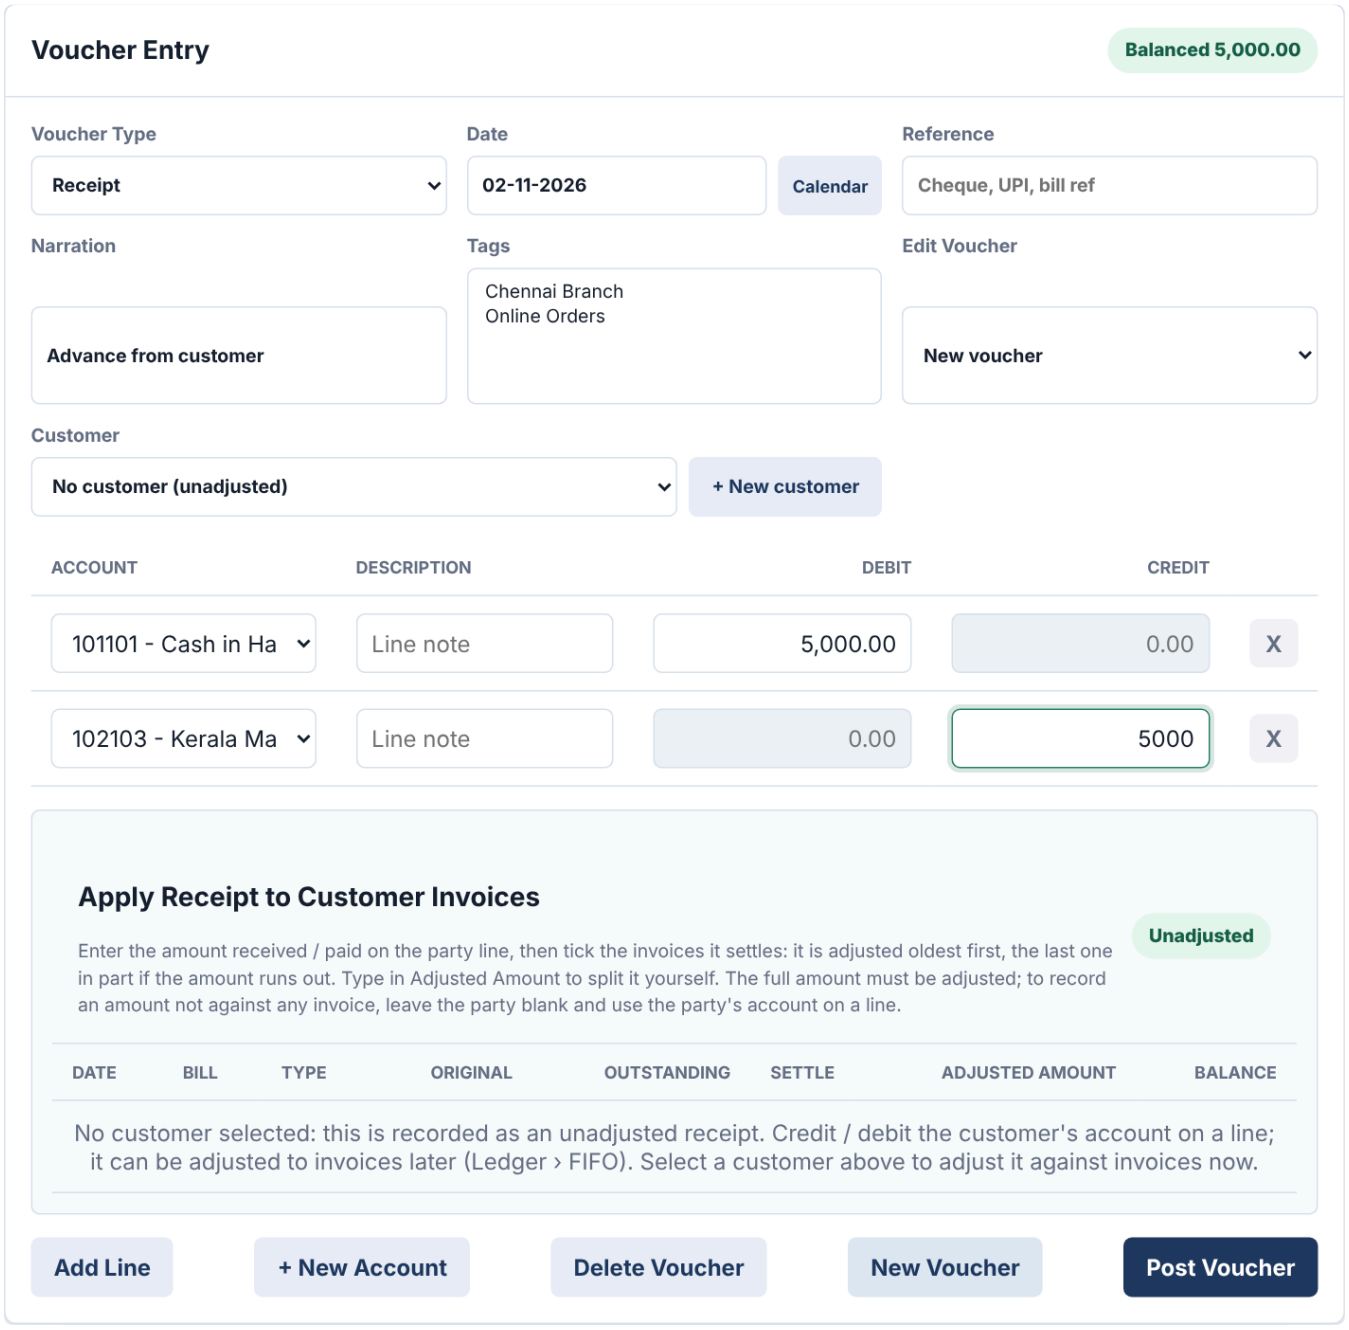

The whole amount must be adjusted. If ₹20,000 is received but only ₹9,440 of invoices are ticked, the receipt is refused until you tick more, lower the amount, or clear the customer. If you tick invoices without typing an amount first, each ticked invoice is settled in full and the amount becomes their total.

With a single bank or cash line, that line follows the amount automatically. If the customer deducted TDS or the bank deducted charges, add a line (for example TDS Receivable) and split the debit side yourself; the badge shows any difference.

Unadjusted receipts and advances (no party selected)

Leave the Customer list on **No customer (unadjusted)** and enter the lines yourself: debit cash or bank, credit the customer's account. Use this for an advance, a payment you cannot match yet, or receipts that are not from customers at all. Payments for rent, salary or other expenses work the same way with no supplier selected.

Adjusting later with FIFO. In **Reports › Ledger**, choose the customer or supplier and press **Auto Adjust FIFO**. The button appears when that party has both unadjusted amounts and outstanding invoices. Unadjusted receipts (or payments) are applied to the oldest outstanding invoices first. Use it periodically for parties who pay on account.

Editing. Reopening a receipt shows its saved split exactly. Clearing the customer on a receipt you adjusted releases those invoices again. A receipt matched by FIFO cannot be reduced below the amount already matched.

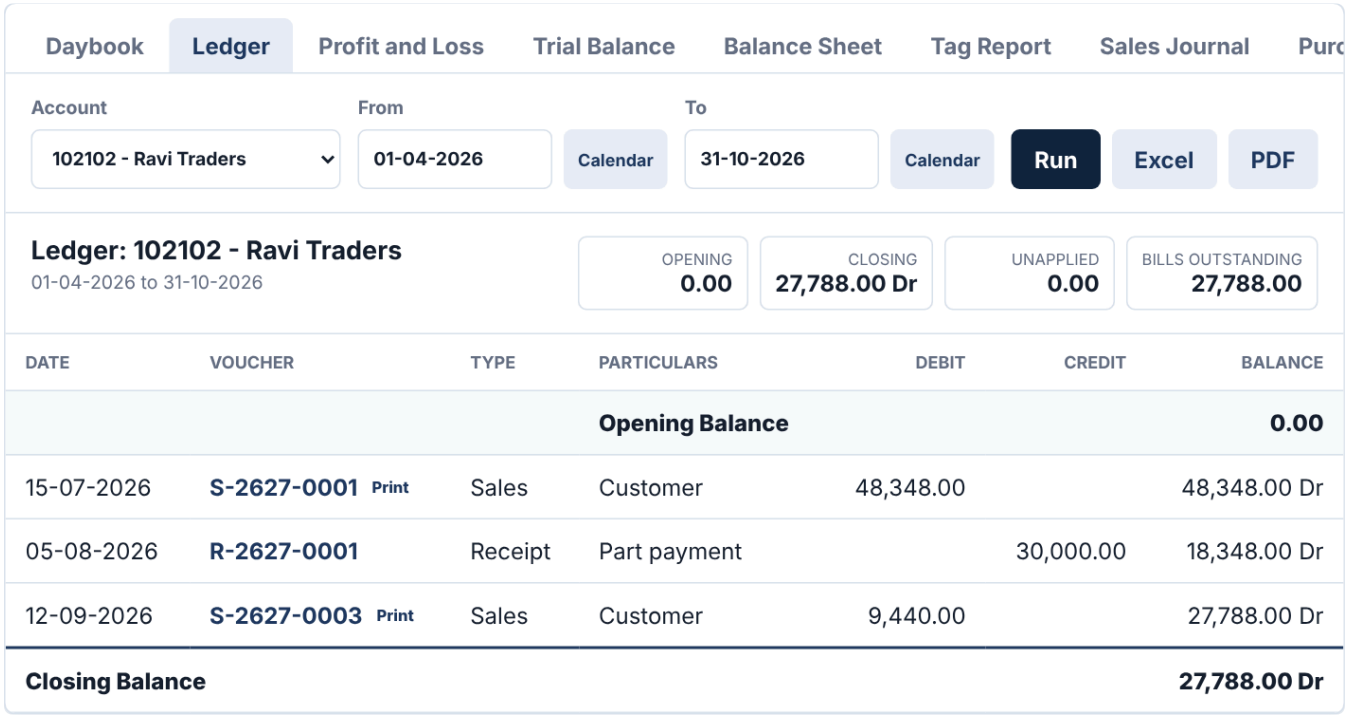

Expense and income vouchers are also bills: an expense voucher can be paid against in a payment, and an income voucher can be settled by a receipt, exactly like invoices.

9. Reports

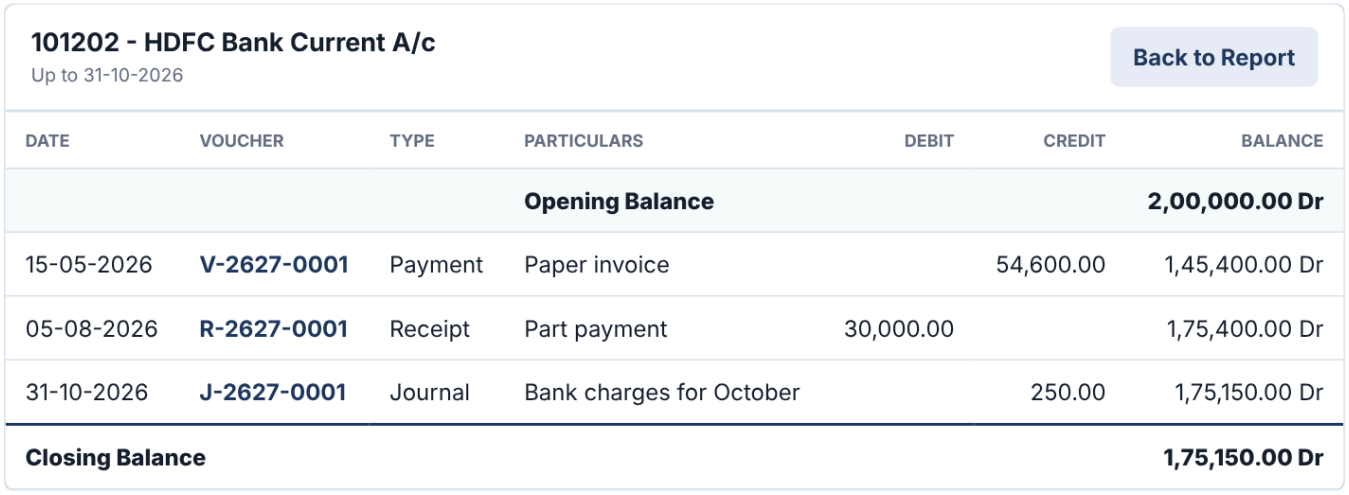

Fourteen reports run straight from the books; none needs a closing entry. Open **Reports**, pick a report tab, set the dates and press **Run**. **Excel** and **PDF** export exactly what is on screen.

Report	Dates	What it shows
Daybook	From – To	Every posting line, voucher by voucher, in date order
Ledger	Account, From – To	One account's entries with running balance; for customers and suppliers also unadjusted amounts and bills outstanding
Trial Balance	As at	Opening, current-year and closing debit/credit for every account, with its sub-head and head
Profit and Loss	From – To	Income and expenses grouped by head and sub-head; net profit or loss
Balance Sheet	As at	Assets, liabilities and equity with the year's result; Difference should read 0.00
Tag Report	Tag, From – To	Totals by account for one tag, account-based or transaction-based (section 10)
Sales / Purchase / Expense / Income Journal	From – To	Invoice register with party, state, product, HSN/SAC, taxable value, CGST, SGST, IGST and total
Stock Summary	From – To	Per product: opening, inward, outward and closing quantity and value
Stock Movement	From – To	Every stock movement with running quantity and value

Report	Dates	What it shows
Fixed Asset Register	As at	Each asset's cost, accumulated depreciation, written-down value and sale
Depreciation Schedule	As at	Year-wise depreciation working per asset; posts depreciation

Drilling down. In the Trial Balance and other summaries, click an account to open its ledger below the report; click a voucher number to open that voucher in Entries. **Back to Report** returns you to where you were.

Trial balance and final accounts.

301101 - Owner Capital	2,50,000.00
Current Profit / (Loss)	-33,150.00
Total Liabilities and Equity	**3,50,388.00**

The Balance Sheet carries the current year's profit or loss and the balance of 302101 Accumulated Profit and Loss; a non-zero Difference means an opening balance is out of balance (see 302102 in section 4).

GST registers. The Sales Journal (and the Purchase, Expense and Income journals) list each invoice line with the party's state, HSN/SAC and the CGST, SGST and IGST, with totals at the top. Export to Excel to reconcile with your GST returns.

Stock. Closing stock is valued by the method chosen in Configuration (weighted average or FIFO).

Fixed assets and depreciation. The Fixed Asset Register lists every asset with cost, accumulated depreciation and written-down value as at the date chosen. To post depreciation, open **Depreciation Schedule**, set the As-at date (normally the year end) and press **Post Depreciation Through Date**. F.A.M.E posts one journal per asset per year (Dr 502301 Depreciation Expense, Cr 104901 Accumulated Depreciation) with the working in the narration. Posting again later adds only the difference.

The Daybook lists every posting line, which is the quickest way to check a day's entries.

10. Tags

Tags let you report on any slice of the business — a branch, a project, a salesperson, a family member's expenses — without adding accounts. A tag can sit on an account (or a head or sub-head) or on individual vouchers.

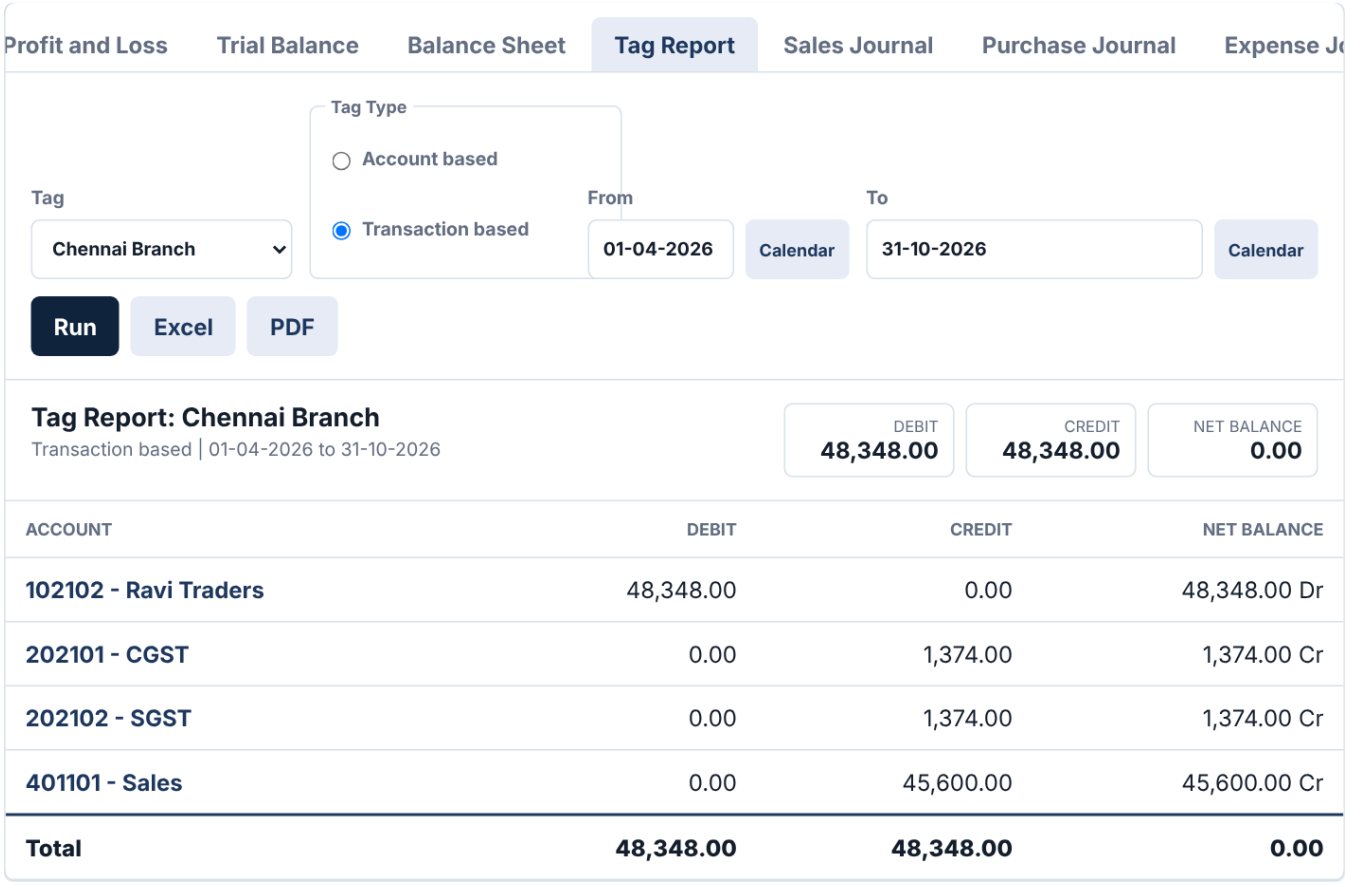

1. Open **Tags**, type a **Tag Name**, pick a colour and press **Create Tag**.

2. To tag accounts: under **Tag Target** choose **Account or Heading**, pick the head, sub-head or account in **Target**, select the tags and press **Save Tags**. Tags can also be chosen in the Chart of Accounts forms.
3. To tag a transaction: pick the tags in the **Tags** box while entering the voucher, or choose **Voucher** as the Tag Target here.

The **Tag Report** has two modes:

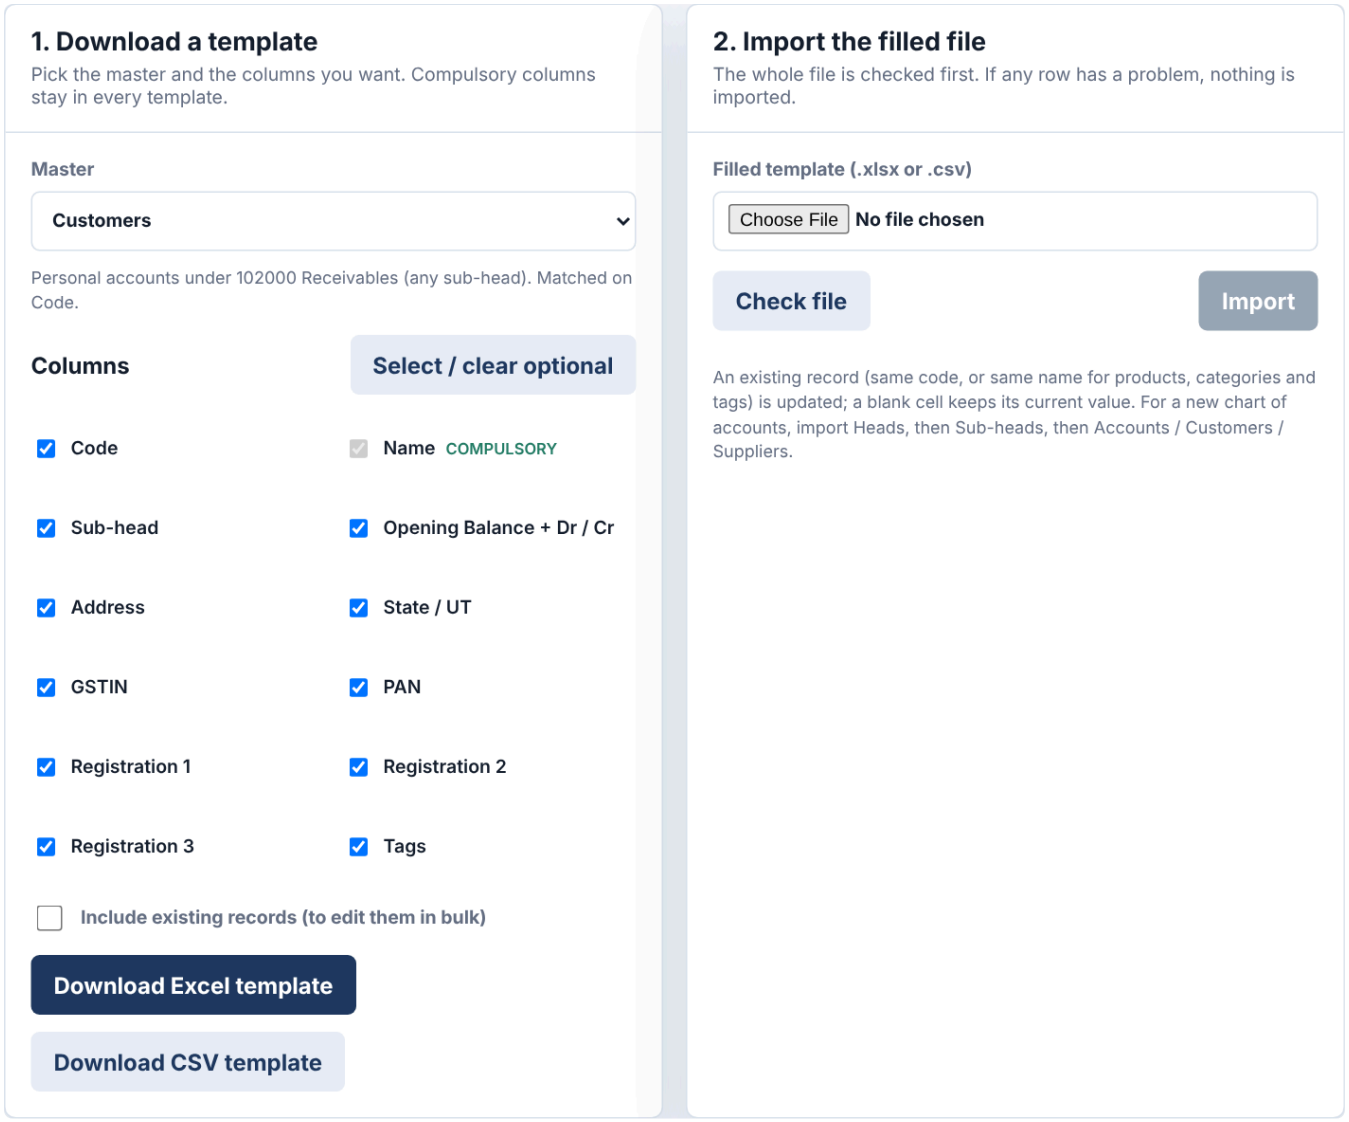

Mode	Shows	Example
Account based	The period's debits and credits on every account carrying the tag (directly or through its head or sub-head)	All accounts tagged "Chennai Branch"
Transaction based	Every posting in vouchers carrying the tag, totalled by account	All sales, tax and customer entries on vouchers tagged "Chennai Branch"

11. Import Masters (bulk upload)

Existing masters — 100 products, a customer list, a full chart of accounts — are loaded from a spreadsheet instead of one by one. You download a template, fill it in Excel, and import it. The whole file is checked first; nothing is written unless every row is correct.

Master	Matched on (an existing match is updated)
Customers	Code
Suppliers / Vendors	Code
Products / Services	Name (any letter case)
Product Categories	Name
Product Sub-categories	Category + Name
Chart of Accounts — Accounts	Code
Chart of Accounts — Sub-heads	Code
Chart of Accounts — Heads	Code
Tags	Name

1. Download a template

1. Open **Import Masters** and choose the **Master**.
2. Tick the columns you want. Compulsory columns (for example Name) stay ticked and cannot be removed.
3. Optional: tick **Include existing records** to get your current data in the template, for editing in bulk.
4. Press **Download Excel template** (or **Download CSV template**).

The Excel template has three sheets: **Data** (fill one record per row; compulsory headings are green and marked *), **Lists** (the values behind the dropdowns) and **Instructions** (what to type in each column, with an example). Do not rename the heading row.

2. Fill it in

- Amounts are plain numbers: 25000 or 25000.50.
- Yes / No, Dr / Cr, Product / Service and Account Type have dropdowns.
- State can be a name or code: Tamil Nadu, TN, or Tamil Nadu (TN).

- Codes can be picked from the list ("102100 - Accounts Receivable") or typed (102100). Leave Code blank for a new record; F.A.M.E gives the next number.
- GSTIN and PAN are checked for format.
- For customers and suppliers, Opening Balance with Dr / Cr sets the opening balance (blank side = Dr for customers, Cr for suppliers).

3. Check and import

1. Choose the filled file (.xlsx or .csv) and press **Check file**.
2. If any row has a problem, nothing is imported. The list shows the row number and the problem, for example "Row 5: GST Rate % "eighteen" is not a valid number". Fix those rows in Excel and check again.
3. When the check reads "The file is clean", press **Import N row(s)**.

Updating in bulk. A row matching an existing record updates it; a blank cell keeps the current value. So the quickest bulk edit is: template with existing records → change the cells you need → import.

Good to know

- Missing product categories, sub-categories and tags are created automatically.
- Import a new chart of accounts in order: Heads, then Sub-heads, then Accounts / Customers / Suppliers.
- Built-in accounts can be renamed by import but not moved (section 4).
- Up to 5,000 rows per file.
- Importing opening balances changes 302102 Opening Balance Adjustment Account, exactly as typing them does. Check it after the import.

12. Backups, restore and data safety

F.A.M.E backs itself up automatically, but the copies sit on the same device. Copy them somewhere else regularly — another disk, a pen drive, or a cloud folder — because a lost or failed device takes its backups with it.

Encrypted storage on this PC

Your books live in an encrypted SQLCipher database file, not in browser storage. After changes, an encrypted copy is saved to **Documents › FAME › Backups** (one per day, last 14 days kept). Copy those .fame files to another disk or cloud folder now and then. A .fame backup opens on both the Windows and Android apps with its passphrase.

Database file	C:\Users\Giri\AppData\Roaming\F.A.M.E\data\fame.db (260 KB)
Last backup	not yet
Unsaved to backup	yes — a backup runs about a minute after your last change
Unlocks automatically	no

Back up now | Open backups folder | Lock now

Restore a .fame backup

Backup file

Choose File No file chosen

Passphrase of that backup

The data on this PC is replaced. It is saved first as a "before-restore" backup.

Restore and replace

Change passphrase

Current passphrase

New passphrase

Repeat new passphrase

Older backups still need the passphrase they were made with.

Change passphrase

Backup Export

Backup Password (optional)

Leave blank for plain JSON

Export Backup

Backup Import

Backup File

Choose File No file chosen

Backup Password (optional)

Only needed for encrypted backups

Import Backup

Power BI / CSV Export

Downloads every database table as a CSV inside one ZIP file, with relationship metadata and Power Query instructions.

Export All Tables (ZIP of CSVs)

This analytical ZIP is not encrypted, so store it securely. JSON backups may optionally be password encrypted.

Backup	Made	Encrypted	Restores on	Use it for
Device backup (.fame)	Automatically, about a minute after your last change and when the app is closed or sent to the background; or **Back up now**	Yes, with the database passphrase	Windows and Android app	Everyday safety, moving to a new device
JSON backup	**Export Backup**	Only if you give a backup password	Windows, Android and web	Moving from the web version, an extra copy in a readable format
Power BI / CSV ZIP	**Export All Tables**	No	— (analysis only)	Power BI, Excel analysis

Device backups. They are kept in **Documents › FAME › Backups**: one file per day for the last 14 days (`FAME-2026-11-02.fame`) plus `FAME-latest.fame`. The panel at the top of the Backup screen shows where the database is, its size, the last backup and whether changes are waiting to be backed up.

- **Back up now** makes one immediately.
- **Open backups folder** (Windows) opens it in File Explorer; **Share latest backup…** (Android) sends the latest file to Drive, email or WhatsApp.
- A .fame file opens with the passphrase that was in use **when it was made**. After a passphrase change, older backups still need the old one.

Restoring a device backup. Under **Restore a .fame backup**, choose the file, type the passphrase of that backup and press **Restore and replace**. All data on this device is replaced; the data being replaced is first saved as `FAME-before-restore-….fame` in the same folder. On a new device, use **Restore from a F.A.M.E device backup** on the first-start screen instead.

Changing the passphrase. Enter the current passphrase and the new one twice, then **Change passphrase**. The whole database is re-encrypted and a fresh backup is made with the new passphrase. **Stop unlocking automatically** forgets a passphrase saved on this device.

Lock now closes the database at once; F.A.M.E asks for the passphrase to continue. Use it before leaving a shared PC.

JSON backups. Export Backup saves the whole company as one JSON file. With a backup password (8 characters or more) the file is encrypted (AES-256-GCM, key derived with PBKDF2-SHA256, 250,000 iterations); without one it is readable text, so keep it private. **Import Backup** replaces everything on this device with the file's contents.

Power BI / CSV export. Export All Tables saves every table as a CSV inside one ZIP, with relationship notes and Power Query steps for building reports in Power BI. The ZIP is not encrypted.

Your data and the cloud. Nothing leaves the device unless you export or share it. On Android, the phone's own cloud backup and phone-to-phone transfer are switched off for F.A.M.E, so client data is never copied to Google Drive without your choice.

13. Troubleshooting and questions

Problem or question	What to do
I forgot my passphrase	It cannot be recovered or reset; the database is unreadable without it. Restore a .fame backup whose passphrase you know (section 12), or a JSON backup.
"Wrong passphrase, or this is not a F.A.M.E database"	Check Caps Lock and keyboard language. A backup restored from another device needs the passphrase that was in use when that backup was made.
A new customer or supplier is missing from the voucher's list	It must have **Personal Account** ticked and sit under head 102000 Receivables (customers) or 201000 Payables (suppliers). Use **+ New customer / + New supplier** on the voucher to create it correctly.
"Company and party states are required for GST calculation"	Fill State / UT in Configuration and on the party's account.
A receipt will not save: "must be fully adjusted"	With a customer selected, the amount must equal the invoices adjusted. Tick another invoice, change the amount, or clear the customer to record it as unadjusted.
A payment for rent or salary asks for a supplier	Leave the Supplier list on "No supplier (unadjusted)" and choose the expense account on a line.

Problem or question	What to do
"GST Enabled cannot be changed"	GST can only be switched on or off before the first voucher.
A built-in account's code or head cannot be changed	Built-in accounts (for example 202101 CGST, 104901 Accumulated Depreciation) are used by the program by code. Rename them if you like; add your own accounts beside them.
An invoice cannot be deleted	It has receipts or payments adjusted against it. Edit or delete those first.
A depreciation journal cannot be edited	Depreciation journals are generated. Correct the asset's rate or dates and post again.
Windows warns "Windows protected your PC" on install	The installer is not code-signed yet. Choose **More info**, then **Run anyway**.
Android will not install the update	An update must be signed with the same key as the installed app. Install the release build over the release build; a debug/test build must be uninstalled first (export a backup before you do).
Where are my files?	Windows: database in %APPDATA%\F.A.M.E\data, backups in Documents\FAME\Backups. Android: backups in Documents/FAME/Backups, exports in Documents/FAME/Exports.
Moving to a new PC or phone	Copy the latest .fame backup to the new device, install F.A.M.E, and on the first screen choose **Restore from a F.A.M.E device backup**.
